

MÉHPATIKA

Target organism:

Honeybee (*Apis mellifera*)

Recommendation:

Treatment of *Ascospheeriosis* disease of honeybees and fighting of infection by *Varroa jacobsoni* (reduction of the *acarus* population).

Method of application:

The preparation shall be uniformly mixed in 1% proportion into the sugar syrup, drinking water or cake used to feed the bees.

Application, dosage:

For an average-sized population of a bee family, 5 ml of MÉHPATIKA (Veterinary product containing natural and nature-identical ingredients, A.U.V.) shall be mixed into 1/2 litre of sugar syrup (cake or drinking water) for each treatment. The treatment shall be repeated ten times, daily, or in function of the feed consumption.

Application instructions:

Treatments shall be started with the so-called stimulation feeding, and shall be repeated in July, August or September. It is extremely important to ensure homogenous distribution of the preparation in the syrup (cake or drinking water). The temperature of the carrier feed must not exceed 40 °C, to prevent decomposition of the active principles.

Contraindication: not known.

Side effects: not known.

Sanitary-alimentary waiting time: not necessary.

Storage:

To be stored under 15 - 25 °C, in light-protected place.

Keep the product sequestered from children!

Attention:

The preparation shall be well shaken prior use. Replace and tightly close the bottle cap each time. The desired effect can only be obtained if the recommended dosage and treatment time are respected. Do not keep the product at temperatures below 10 °C, as the active principle precipitates and thus the pharmaceutical effect will be diminished. Treatments with MÉHPATIKA cannot replace other special drug treatments against *Varroa* mite.

Work protection instructions:

This product is exclusively consisted of natural and nature-identical ingredients. In addition to the instructions given on the label no other protection is necessary.

Preservation:

In its original packaging, the preparation can be used within the date indicated on the label, 18 months from manufacturing date. Once opened, the content of the bottle shall be used within one year.

Marketability:

The preparation is freely marketable, no veterinary recipe is needed.

Packaging:

One-litre plastic bottle with safety cap.

Registration number: 17/2001
